OpSec Security Labels

Solving the Toughest Requirements

OpSec manufactures a full range of customized security labels. These products are ideal for authentication of individuals, documents, and products. OpSec labels are difficult to replicate, easy to verify, and impossible to remove without leaving clear evidence of tampering. They can include a full selection of overt and covert security technologies. Organizations can choose to use either OpSec Advantage™ labels or OpSec OVD labels, depending on the application.

PRODUCT FEATURES

- ✦ Tamper-evident protection
- ✦ Serialization
- ✦ Barcoding
- ✦ RFID
- ✦ Strictly secure processing and inventory management

SECURITY OPTIONS

Overt

- ✦ OpSec Advantage™ trimodal image
- ✦ OVD (optically variable device)
- ✦ HRI (transparent OVD)
- ✦ OVI (optically variable ink)
- ✦ MultiTone™ technology
- ✦ Four-channel
- ✦ RNA (random number authentication)
- ✦ Sophisticated kinetic effects

Covert

- ✦ UV inks
- ✦ Aegis™
- ✦ Microtext
- ✦ Nanotext
- ✦ Concealed images
- ✦ Micro-images

OpSec Advantage™ Labels

In a security-conscious world, OpSec Advantage labels deliver the highest visual security protection for identification, documents, and property. The labels' trimodal properties allow the image to change from green to orange and then transparent, depending on the viewing angle.

These are not subtle, marginal color shifts, as with other OVDs; OpSec Advantage images are obvious to anyone, anywhere, without special training or devices.

OpSec Advantage labels come in three choices – transparent, opaque, or a combination of the two. Manufactured specifically to each customer's needs, labels can include a number of security options, such as a void release pattern for tamper-evidence, RFID technology for tracking, or specialty inks for added security and authentication. In more than 20 years of use worldwide, OpSec Advantage has defied all efforts at duplication.

OpSec OVD Labels

OpSec's OVD labels offer a secure, cost-effective solution for authenticating brands. As a result, brand owners can protect consumers from health and safety risks inherent in poorly constructed counterfeits.

OpSec's OVD labels employ a permanent adhesive that sets quickly. With any kind of tampering, these labels self-destruct, leaving behind a patterned image that clearly identifies any attempts at misuse.
